Claims 1-7 are presented for examination.

The amendments and remarks filed on November 29, 2005 have been received and entered.

Claims 1-7 are rejected under 35 U.S.C. 103 as being unpatentable over the references cited in the office action of July 29, 2005 and further over Winkler et al. (Molecular Vision 1999). Winkler et al. teaches the role of oxidation in relation to macular degeneration and the effect of superoxide dismutase in preventing oxidative damage. See the abstract.

Applicant's arguments and remarks have been carefully considered, but are not deemed to be persuasive. Applicant alleges criticality to the differences in the structure of the claimed compounds in comparison with the ones used by the prior art. Applicant is reminded that the primary reference was used to show that the claimed compounds have antioxidants and superoxide dismutase activities. The remaining references were used to show that certain compounds with superoxide dismutase activity and antioxidant activity have been previously used for the treatment of macular degeneration. Furthermore, Winkler et al. was used to show the correlation between the oxidative damage and macular degeneration, and the use of SOD for preventing such damage. The above reference teaches the general concept, that compounds having superoxide dismutase activity can be used for the prevention of oxidative damage and conditions such as macular degeneration. Thus, it would have been obvious to a person skilled in the art to use a compound having SOD mimetic activity and use it for the treatment of conditions associated with oxidative damage in the absence of evidence to the contrary.
